

Info about the project:

- Name and last name: Maksym Maltsev
- Name of the project: Homework manager
- Repository link: [Animaaad/Homework-manager](#)

Info about the reported version:

- Tag: week4
- Time period: 4. week, 17.3. - 23.3.2025

Plan:

Setup of the developmental environment, mock of frontend

Work done:

Set up git, vite.

Justification of differences between the plan and the work performed:

It is difficult to get into all this new world of creating web applications, so I really only managed to set up git and vite.

Plan on the future week:

Change the specification, make a mock of frontend, potentially start working on api.

Problems:

There was a bunch of problems with setting up git, I didn't even fully understand why they were happening, but it worked in the end.

Changes in specification:

Will be done next week
